

Business Continuity Plan (BCP)

Company Name: [Your Company Name]

Version: 1.0

Date: [YYYY-MM-DD]

Confidential – Internal Use Only

1.Purpose

This document outlines the procedures and measures to ensure continuous operation of [Platform Name] in the event of any disruptive incident, including technical failures, natural disasters, cyberattacks, or other operational risks, in accordance with BMM Testlabs compliance requirements.

2.Scope

This BCP applies to:

- Core Gaming Platform Systems (game servers, transaction engines)
- Back-office & Admin Portals
- Payment Gateways & Transaction Processing
- Customer Support & Communication Channels
- IT Infrastructure & Data Centers

3.Objectives

- Maintain platform availability with minimal downtime.
- Protect critical data from loss or corruption.
- Restore normal operations within defined Recovery Time Objectives (RTO) and Recovery Point Objectives (RPO).
- Ensure clear communication with regulators, partners, and players during disruptions

4.Risk Assessment

4.1General Risk Assessment

Risk Type	Impact	Likelihood	Measures
Data center outage	High-full platform downtime	Medium	Redundant hosting in multiple regions, automatic failover
Cyberattack / DDoS	High-service disruption, dat	High	WAF, DDoS protection, continuous monitoring
Payment gateway failure	Medium-transaction delays	Medium	Multiple payment provider

			integration
Natural disaster	Medium to High	Low	Cloud infrastructure with geo-redundancy
Hardware failure	Medium	Medium	Hardware RAID, hot-swappable components

4.2 Operational Risks and Controls

The system provides a Risk Control Setting to manage member withdrawals by currency. When enabled, withdrawal requests meeting the configured Withdrawal Risk Control Conditions will be locked and shown in the back office Deposit/Withdrawal Review for further approval or rejection.

Withdrawal Risk Control Toggle

- First Withdrawal
 - The member's very first withdrawal request will be blocked.
- Bonus Claimed Before Withdrawal
 - If the member has claimed any non-betting funds (e.g., promotional bonuses, gift money, rebate) before withdrawal, the withdrawal request will be blocked.
- Total Withdrawal > Total Deposit
 - If the member's historical accumulated withdrawals exceed the accumulated deposits (including pending withdrawal/deposit orders), the withdrawal request will be blocked.
- Withdrawal Amount Greater Than Specified Amount
 - If a single withdrawal request exceeds the platform's specified limit, it will be blocked.

This feature enhances the platform's ability to control fund flows, ensuring transaction security and compliance.

5. Roles & Responsibilities

Role	Responsibility
BCP Manager	Oversees activation & execution of BCP
IT Operations Lead	System failover, server recovery

Security Officer	Incident detection, forensic analysis
Customer Support Lead	Player notifications & status updates
Compliance Officer	Reporting to BMM & regulators

6.Disaster Response Procedures

Incident Detection:

- 24/7 monitoring via [Monitoring Tool]
- Automatic alerts to IT & Security teams
- Initial incident report

Incident Classification:

- Critical: Full platform downtime or data breach
- High: Payment or login failures affecting >30% users
- Medium: Minor performance degradation

Activation of BCP:

- Decision made by BCP Manager & IT Operations Lead
- Notify internal teams, partners, regulators if needed

7.Recovery Strategy

System Component	RTO	RPO	Recovery Method
Core Game Servers	2 hrs	15 min	Failover to secondary region
Database	1 hr	5 min	Hot standby replication
Payment Processing	4 hrs	30 min	Switch to backup provider
Customer Support Tools	6 hrs	1 hr	Cloud-based backup system

8.Data Backup Policy

- Frequency: Database backups every 5 minutes; full system backups daily
- Storage: Encrypted backups in 2+ geographic regions
- Retention: Minimum 7 days
- Testing: Quarterly restoration tests

9.Communication Plan

- Internal: Notion / Telegram / Teams alerts for all updates
- External: Status page Telegram / Teams updated immediately
- Regulators & BMM: Notify within 24 hours if operations are impacted

10.Testing & Review

- Testing: Semi-annual BCP simulation drills
- Review: Annually, or after major incident
- Version Control: Maintain version history & approval logs

11.Appendix

- Contact List: Key personnel, vendors, data center support numbers
- System Diagram: Architecture of core systems and failover points
- Incident Log Template
